

Press Release

SIM-AVIONICS TO JOIN FLIGHTDECK SOLUTIONS, LTD

Newmarket, Ontario, Canada, March 01, 2010

Flightdeck Solutions, Ltd (FDS) announced today that Sim-Avionics, suppliers of premier Avionics Software packages for the B777, B737NG and B747, will be joining the FDS Team.

This strategic move allows FDS and SIM-Avionics to combine resources, knowledge and strategic planning in the further development of Higher Fidelity FBPTs and related products.

“Sim-Avionics has pushed very hard over the past 6-7 years in developing a solid base product that suits our trainers and individual components very well. We felt strongly that working directly with SIM-AVIONICS our Sales, Marketing and Product Development strengths would bolster their solid efforts in Avionics Software development. We see great things happening with our two teams working on the same path and pushing forward on increasing the fidelity of our respective products” said Peter Cos, President (FDS).

“We at Sim-Avionics are extremely excited to be combining talents with market leader Flightdeck Solutions. This logical step forward, provides us with the opportunity to enhance and streamline our services to both new and existing customers by offering a complete solution with seamless hardware and software integration, improved support and an expanding range of detailed software products” said Mark Hastings.

Flightdeck Solutions

Flightdeck Solutions was created to meet the global requirement for effective low cost flight simulation products. FDS customers range from Research/Poly-Technical Institutes, Flight Schools, High End Entertainment System Users, all the way through to aircraft manufacturers.
